

Third Edition Workshop Management sciences and sustainable development issues

April 3rd 2025

Paris-Nanterre University

The third edition of the workshop between CEROS and CEREFIGE aims to facilitate the exchange of ideas and results between professionals and academics. This workshop will focus on the concept of sustainable development issues faced by organizations nowadays. The goal is to deepen our understanding of the contemporary business environment and its implications for management sciences.

Presentation

In recent decades, the environment in which companies and organizations operate has undergone profound changes, particularly regarding the emergence of new sustainable development issues. These changes urged companies and organizations to evolve, to integrate these new responsibilities into their processes. In this context, the workshop aims to emphasize these managerial and strategic changes, as well as, their resultant implications for organizations management, fostering a better understanding of the challenges they face today.

The workshop intends to explore all dimensions studied by management sciences that are present within organizations. This will facilitate a comprehensive exchange of ideas and results by encouraging transversal inquiry.

The research themes of this workshop include:

- **Adapting to new management dynamics**
- **Creating responsible values**
- **Managing stakeholders' interests**
- **Sustaining new practices**

Organization

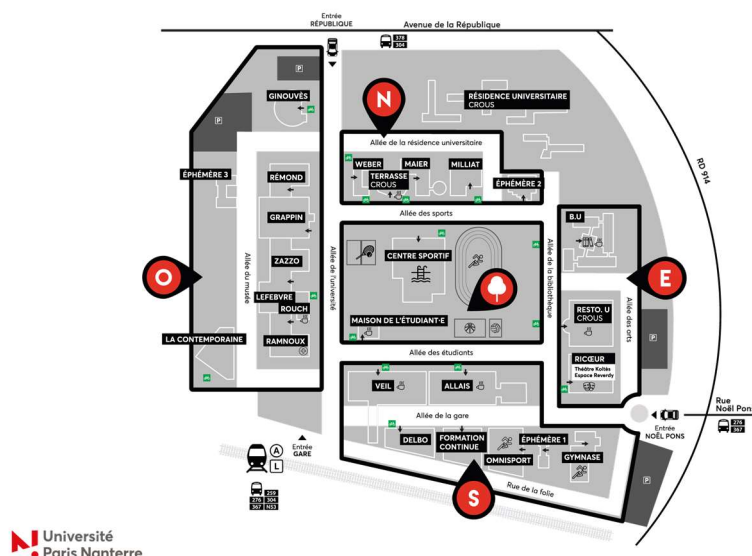

The workshop is organized by PhD candidates from CEROS (University Paris Nanterre). Its primary aim is to provide an opportunity for all PhD candidates in management sciences from CEROS and CEREFIGE to present and discuss their research. Additionally, it is open to all students in Management Sciences (bachelor's and master's degree levels) to raise awareness about the challenges companies face today regarding sustainable development issues.

The workshop will bring together both academic and professional perspectives to foster genuine exchanges of ideas and results.

The workshop will be held on April 3rd, 2025, at the University Paris Nanterre, accessible via RER A and Train L (Station: Nanterre Université).
